

We look at feed from a different perspective...

INNOVATIVE NUTRITION

NUTRIN, cutting edge feeds developed by nutritional experts.

We use the latest technological production processes.

We are committed to quality and products with higher added value.

Our priority is animal nutrition that guarantees a long and healthy life.

Our feeds contain no palm oil or soya.

NUTRIN Complete is a complete, balanced source of essential nutrients.

NUTRIN Complete production technology allows numerous components to be processed into one, nutritionally balanced granule that respects the specific requirements of various animal species while eliminating the need to make a selective choice.

Feeding becomes easy and straightforward, and you always know the animal is getting everything it needs.

The exceptional composition of NUTRIN Vital Snack supplementary feed supports the animal's health and fitness.

A healthy, crunchy reward with the beneficial effects of herbs and other enriching ingredients.

Diversification of standard feed rations, a fun form of feeding.

Feed contains no added sugar, palm oil, soya, artificial colours, preservatives or flavours.

NUTRIN Nature complete feeds are varied natural mixtures that meet the nutritional requirements of animals and satisfy their taste preferences.

Unique recipe in harmony with the NUTRIN brand philosophy.

High quality varied feed that animals consume in its entirety and which meets all their nutritional requirements.

Exceptional taste. Feeds contain no artificial colours, preservatives or flavours.

Our specially designed, hand-blended supplementary feed mixture of herbs and wild fruits NUTRIN Nature was developed to diversify the usual feed ration of herbivorous mammals and parrots.

The unique combination of herbs promotes detoxification and digestion, helps in case of oral inflammation, relieves skin problems and boosts immunity. Wild berries enrich feed for parrots with a number of essential vitamins, minerals, antioxidants and fibre.

A range of complete feeds for aquarium fish and terrarium animals with a rich, balanced range of nutrients.

The mixture of ingredients contained in NUTRIN boosts the animal's defence mechanisms, positively affects colouring and bone structure, and helps growth.

The feed has excellent physical properties and is easier to digest thanks to our modern production technology.

Reducing the amount of waste products from the metabolic processes of fish has a positive effect on the quality of water in the aquarium.

A range of complete, easily digestible extruded feeds for cyprinids with nutrient-rich ingredients.

NUTRIN supports nutrient and energy metabolism and immunity and thus helps improve vigour and healthy fish growth. By bringing together modern production technology and a combination of ingredients with exceptional properties, we have developed highly attractive products that force fish to actively retrieve food from the surface.

As well as ingredients promoting bold colouring, feeds also contain extra carotenoids, which can further enhance this effect.

NUTRIN Canine is a specially developed supplementary dog food that covers all the nutritional requirements of adult dogs fed on meat. It contains no meat, cereals, preservatives, artificial colours, flavour enhancers, soya or palm oil. It is also suitable for dogs with an allergy to gluten.

Thanks to its unique formula, it ensures a balanced daily dose of vital minerals, vitamins, trace elements and essential fatty acids that dogs on a pure meat diet lack.

Extrusion production technology increases digestibility and the availability of nutrients, plus it inactivates anti-nutrients.

NUTRIN Zoo feeds for animals in zoological gardens were developed to meet the nutritional requirements of specific species.

Our feed formulas are developed in cooperation with nutritional experts working directly in zoos. We began working with zoos in 2009 to develop feed for rhinoceroses.

Over time, our collaboration has expanded to include the production of feeds for apes (gorillas, chimpanzees, orangutans) and other animals.
