FACE MASK WITH NANOFILTER

by Holík International s.r.o.

PRODUCT DESCRIPTION:

Holík International is able to produce various types of face masks according to the specific requirements of the client – with (or without) a removable nanofilter, from various textile materials and with various holders, washable or single-use, with the option of ergonomic shaping and in three different sizes. Masks are suitable for the general public for daily use in places without direct exposure to contaminating agents (the product does not provide the same level of protection as half masks or respirators).

COMPANY PROFILE:

Holík International is a traditional family company focused on the production of protective gloves and footwear for firefighters, rescuers and security forces made of high-quality materials. In response to the coronavirus pandemic, the company adjusted its product range and included face masks.

- CE and EN ISO 13688:2014 for cotton face masks (certification may vary depending on the product specification)
- available by May 2020
- production capacity: 11,000 pcs per month (3,500,000 pcs by September 2020)
