RESPIRA HALF MASK WITH FILTER by Nanologix Corporation, s.r.o.

PRODUCT DESCRIPTION:

RESPIRA is suitable for work in the first line and in an environment with an increased risk of contamination. The product is intended especially for healthcare staff, security forces and rescue workers. The half mask was designed to ensure perfect tightness, high durability and user-friendliness (the mask part is made of a special silicone used in healthcare). RESPIRA filters (FFP3 or FFP2) intentionally do not have an exhalation valve – the pressure of exhaled air is used to regenerate the filtration insert, which prolongs the lifespan of the filter.

COMPANY PROFILE:

Nanologix Corporation was established with the aim of commercializing research and development in the field of breathing masks. The company innovates and develops exclusive products for the armed forces, rescue services or workers in the fields of medicine, biology, radiobiology and nuclear physics.
