Green Center
Company Introduction

Product portfolio

We provide complete solutions for parking and access – from hardware to smart software for monitoring and management. Our systems are designed to function reliably in any environment, regardless of project size.

The fourth generation of the Variant parking system combines modern design, intuitive operation, and durable construction. In addition to parking, we also secure entrances to offices, shopping centers, and public spaces.

About Green Center

Green Center is a purely Czech company founded in 1992, developing, manufacturing, and installing solutions for parking, access, and related technologies. With in-house development and production, we control the entire process from design to service, ensuring fast availability of spare parts and professional support provided by our own team.

We are headquartered in Prague–Kbely, with a production facility in Dvůr Králové nad Labem. Together, we form a team of around 100 experts and carry out hundreds of projects each year in the Czech Republic and abroad. Our systems operate in 27 countries – with our own branches in Poland and Slovenia – and we currently have over 1,200 active installations.

Parking Systems

The GP4P Variant parking system ensures a smooth operation of any parking lot. The basic setup of terminals, barriers, and payment stations can be further enhanced with features such as license plate recognition or guidance to available parking spaces.

Access Systems

Green Center access control systems manage entry to buildings and individual zones. We offer turnstiles and speedgate solutions that can be equipped with card readers, QR code scanners or payment terminals.

Remote Management

Our management and monitoring software gives you full control over your parking lot.

PMC offers comprehensive tools for managing and operating an entire network of parking sites, while MARS is designed for clear real-time monitoring of equipment status.

Our Segments

There are currently over 1,200 of our installations in operation across various types of facilities – from residential projects and office complexes to airports and shopping centers. Every day, our systems ensure millions of smooth passages and secure access for hundreds of thousands of users.
