COMTES FHT®

- We are a leading European provider of services in the area of metallic materials development, material testing and metallurgical technology optimization.
- The results of our work can be met while driving, when taking power from the network, or are used by doctors during surgery and Swiss watchmakers assembling complex mechanical machines.
- We put emphasis on the fastest possible transfer of R&D results to industrial practice.
- Our expertise and practical approach to problem solving are regularly used by a number of major companies, such as Daimler, Volkswagen, Robert Bosch, Black & Decker, Doosan, Mubea, TÜV Nord and others.

R&D in metals

We will be pleased to welcome you to our laboratories.

History of our success

2000 — Establishing of COMTES FHT s.r.o. as an engineering office with 5 employees

2006 — The company becomes an exclusive development partner of the German concern Benteler Stahl / Rohr (a manufacturer of steel tubes and profiles for various industrial applications)

2007 — Transformation into COMTES FHT a.s., a joint stock company, which is declared as a research organization under the European rules

2013 — Opening the West-Bohemian Centre of Materials and Metallurgy

2019 — Completion of the Science and Technology Park in Dobřany offering development and office facilities for innovative companies

2024 — The testing methodology of small specimens developed by COMTES FHT has been incorporated into international standards ISO/ASTM 52909 (testing of 3D printed parts) and ASTM E8/E8M (tensile testing).
