

**SARACEN® is a new type of kitchen knife, whose revolutionary design comes from the Czech Republic and is protected by patent offices around the world.**

Thanks to the advanced ergonomic handle and the center of gravity located directly above the knife blade, there is a perpendicular transfer of force to the blade. The result is better control and precision of the cut, easier cutting of even hard materials, with less hand fatigue and comfort even during longer work.

## MOTTO

### A knife that changes the rules

The saber-shaped blade further facilitates cutting

The unique design with better ergonomics also ensures **optimal balance** of the tool and **protection** of the hand joints from impacts on the surface.

The knife is made with a high proportion of manual labor.

#### BLADE MATERIAL AND HARDNESS

SARACEN® knives are made of high-quality Damascus steel (67 layers) with a hardness of approximately  $60 \pm 2$  HRC. This combination ensures long-lasting sharpness, high wear resistance and sufficient toughness for everyday use.

#### DLC SURFACE – BLACK DIAMOND

Selected models are equipped with DLC (Diamond Like Carbon) coating. This technology significantly increases the surface hardness of the blade, reduces friction during cutting and increases corrosion resistance. DLC also gives the knife an exclusive dark appearance and extends the life of the blade in professional use.

## PRODUCT LINES

### SARACEN

### ECLIPSE

### PRO

### BASIC

#### COMPETITIVE ADVANTAGES:

- Easier and more precise cutting than with classic knives
- Global patent protection of the design
- Significantly better ergonomics than with classic knives
- Combination of functionality, design and craftsmanship

#### REFERENCES / MILESTONES:

- Final negotiations with German partners are currently underway to launch on the German, Austria and Swiss markets.
- Complete product portfolio for professional use
- Positive feedback from chefs and gastronomy professionals see website.
- Brand readiness for international expansion and distribution cooperation
