LogMan.io

TeskaLabs

Modern log management

Collection, analysis and archiving of logs

TeskaLabs LogMan.io provides a comprehensive overview of your IT infrastructure and cybersecurity. It enables logs easily search, identify and **immediately respond** to operational events and security threats.

TeskaLabs LogMan.io is designed to help your organization run **faster** and **more efficiently**.

TeskaLabs LogMan.io brings

A complete overview of the IT infrastructure│ Early detection of cyber threats│ Clear user interface

Cyber security

TeskaLabs LogMan.io helps quickly **detect** and analyze **cyber threats** and operational incidents and reports a **comprehensive overview** of what's happening in IT infrastructure. Through data analysis in real time, it can be **reacted** to **immediately** to a cyber event or operational incident. **Immutably stored data** provides a reliable record of incidents for investigation and subsequent prevention.

Compliance with legislation

Fulfilling requirements based on the new European Union Directive **NIS2** and the **Act on Cyber Security** No. 181/2014 Coll**.**, and Decree on Cyber Security no. 82/2018 Coll. **Data storage** for a period of **18 months** to fill requirements of the Cyber Security Act 82/2018 (critical, important information systems), and **ČSN ISO 27001:2013.**

Support

Support from the manufacturer is available **from the first consultation**, through deployment to operation of the technology. All questions and assistance are handled by a **team of security experts and specialists**. During the first 3 months after deployment, there is a so-called Hyper Care period. During this time, the deployment is given extra attention and care to make the transition to live operation as smooth as possible.

Main benefits of TeskaLabs LogMan.io

- Complete overview of all data from the IT infrastructure and events in the company
- Easy search and visibility of all logs
- Clear and modern user interface
- Early detection and immediate response to potential threats or issues
- Large number of pre-made visualizations
- Possibility of expanding the set of dashboards with new visualizations according to the individual needs of the customer and its infrastructure
- An unlimited number of visualizations or dashboards without affecting the performance of the technology
- Immediate response to events
- A modern tool without the historical burden and technological debt
- Seamless connection of non-standard logo sources
- Creation of own detection rules without the need for programming
- Option to extend LogMan.io to a full-fledged SIEM
- If the volume of data within the license is exceeded, the data is not discarded
- License-unlimited data storage
- Operation and work with the tool are intuitive and undemanding

Technical parameters

- Support for more than 350 different log sources
- Support for collecting logs from dozens of different databases
- Real-time data reporting and analysis
- Easy scaling of the tool according to the growth of the IT infrastructure without affecting system performance
- Throughput of more than 500,000 events per second
- Multi-user mode. An unlimited number of users can use Logman.io PLUS at once
- Multi-tenancy mode. A single physical installation provides multiple separate instances
- Single Sign-on connectivity with Active Directory
- TeskaLabs SeaCatAuth, for authentication, authorization, user role management, and access control
- TeskaLabs SP-Lang. An easy and intuitive expression language for writing your parsers and correlation rules
- Easy connection to Business Intelligence, Big Data, and Machine Learning modules
- High availability, geographically separated cluster
- Distribution in Docker containers
- Guaranteed immutability of data
- Cloud solution support

TeskaLabs LogMan.io deployment options

On-premise or local deployment

On-premise deployment can be implemented by delivering a software license (with installation on the customer's hardware) or as a total delivery, i.e., software license and hardware.

Software as a service (SaaS)

The fastest, most economical way to deploy log management. The solution is included in the form of services. This eliminates the need to worry about hardware, technology management, and operation.
