Minimalistic luxury of natural concrete ...

A man and a woman are smiling in a pottery studio. The man is standing behind the woman, who has her arms crossed. They are surrounded by various concrete products, including bowls, vases, and planters, some of which are on shelves in the background. The studio has a rustic feel with a brick wall and large windows.

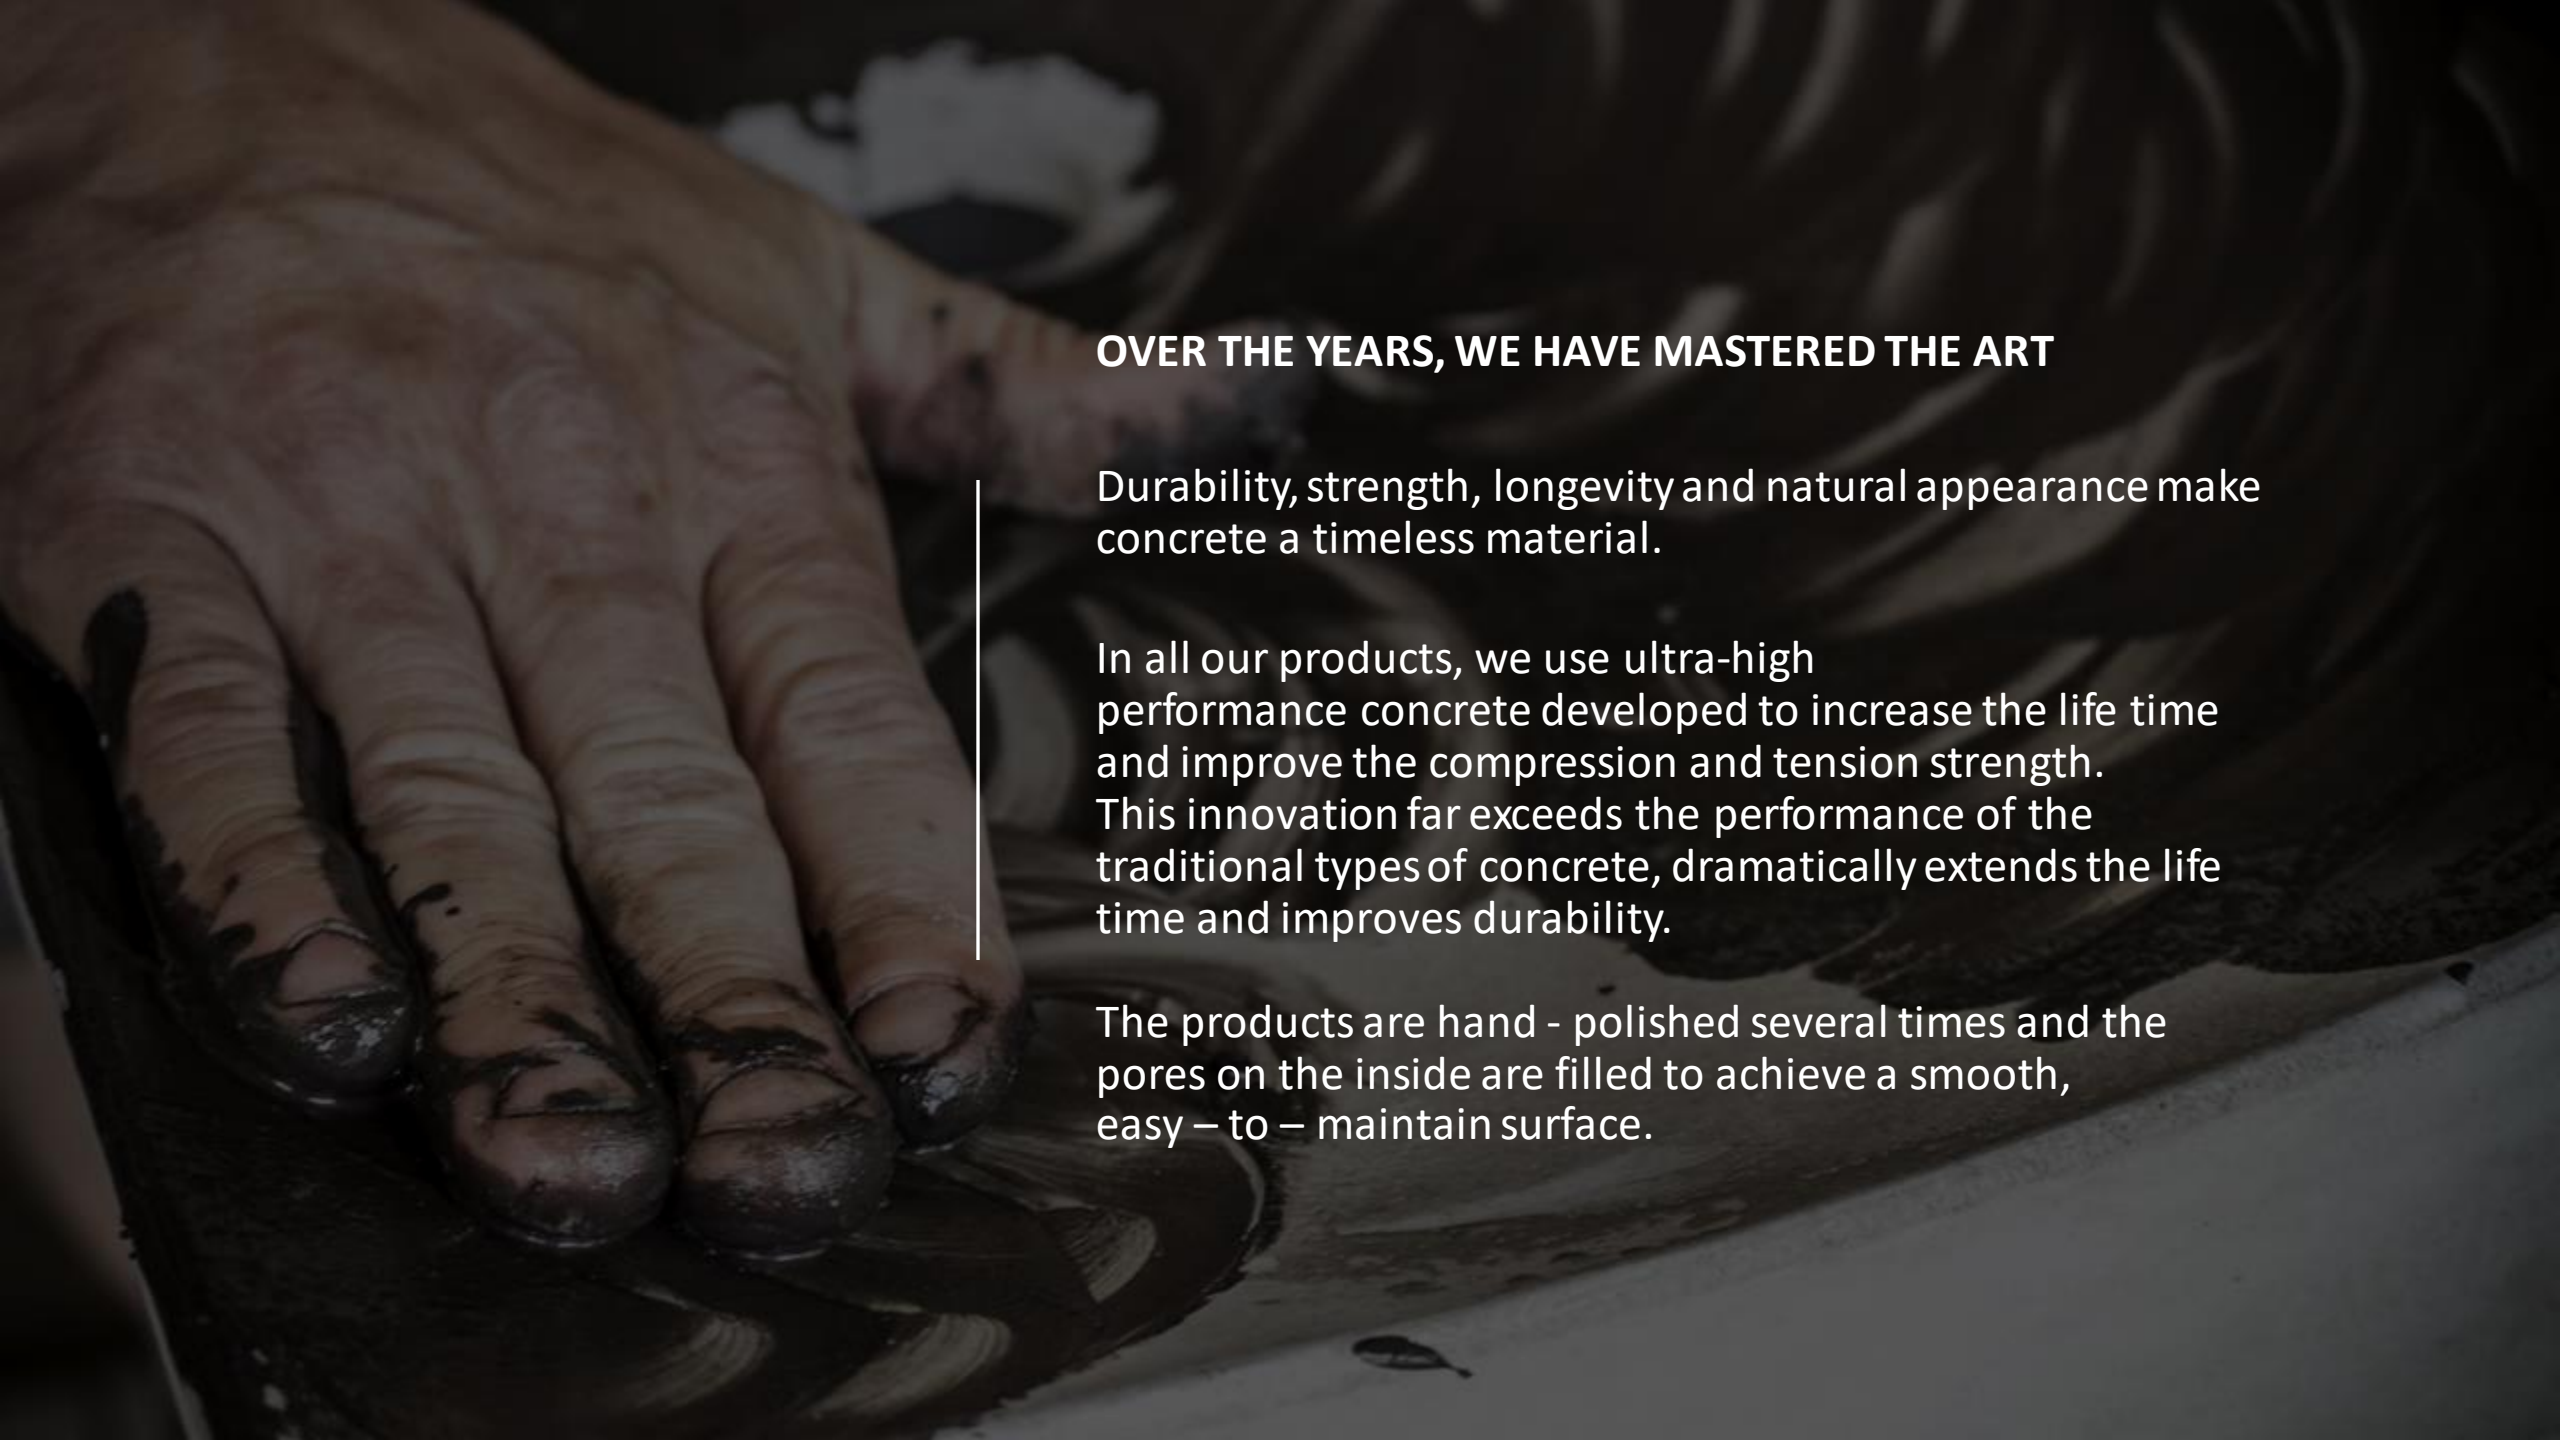

For Jana and Marek, people behind the Créer since 2016, working with concrete has become the sense of their lives.

Concrete does not necessarily have to be raw and rough. Over the years of the existence of the company, we have understood that giving a specific form to concrete products is something to which you must fully commit.

Each product is made by hand.

Our in-house technologies and concrete mixtures allow us to produce a wide range of products typical for their consistently top standards. Our standard portfolio offers unique concrete furniture or your living room, elegant bathroom equipment, compact kitchen units and even the smallest interior accessories. More, we will be happy to design for you various special items depending on your preferences.

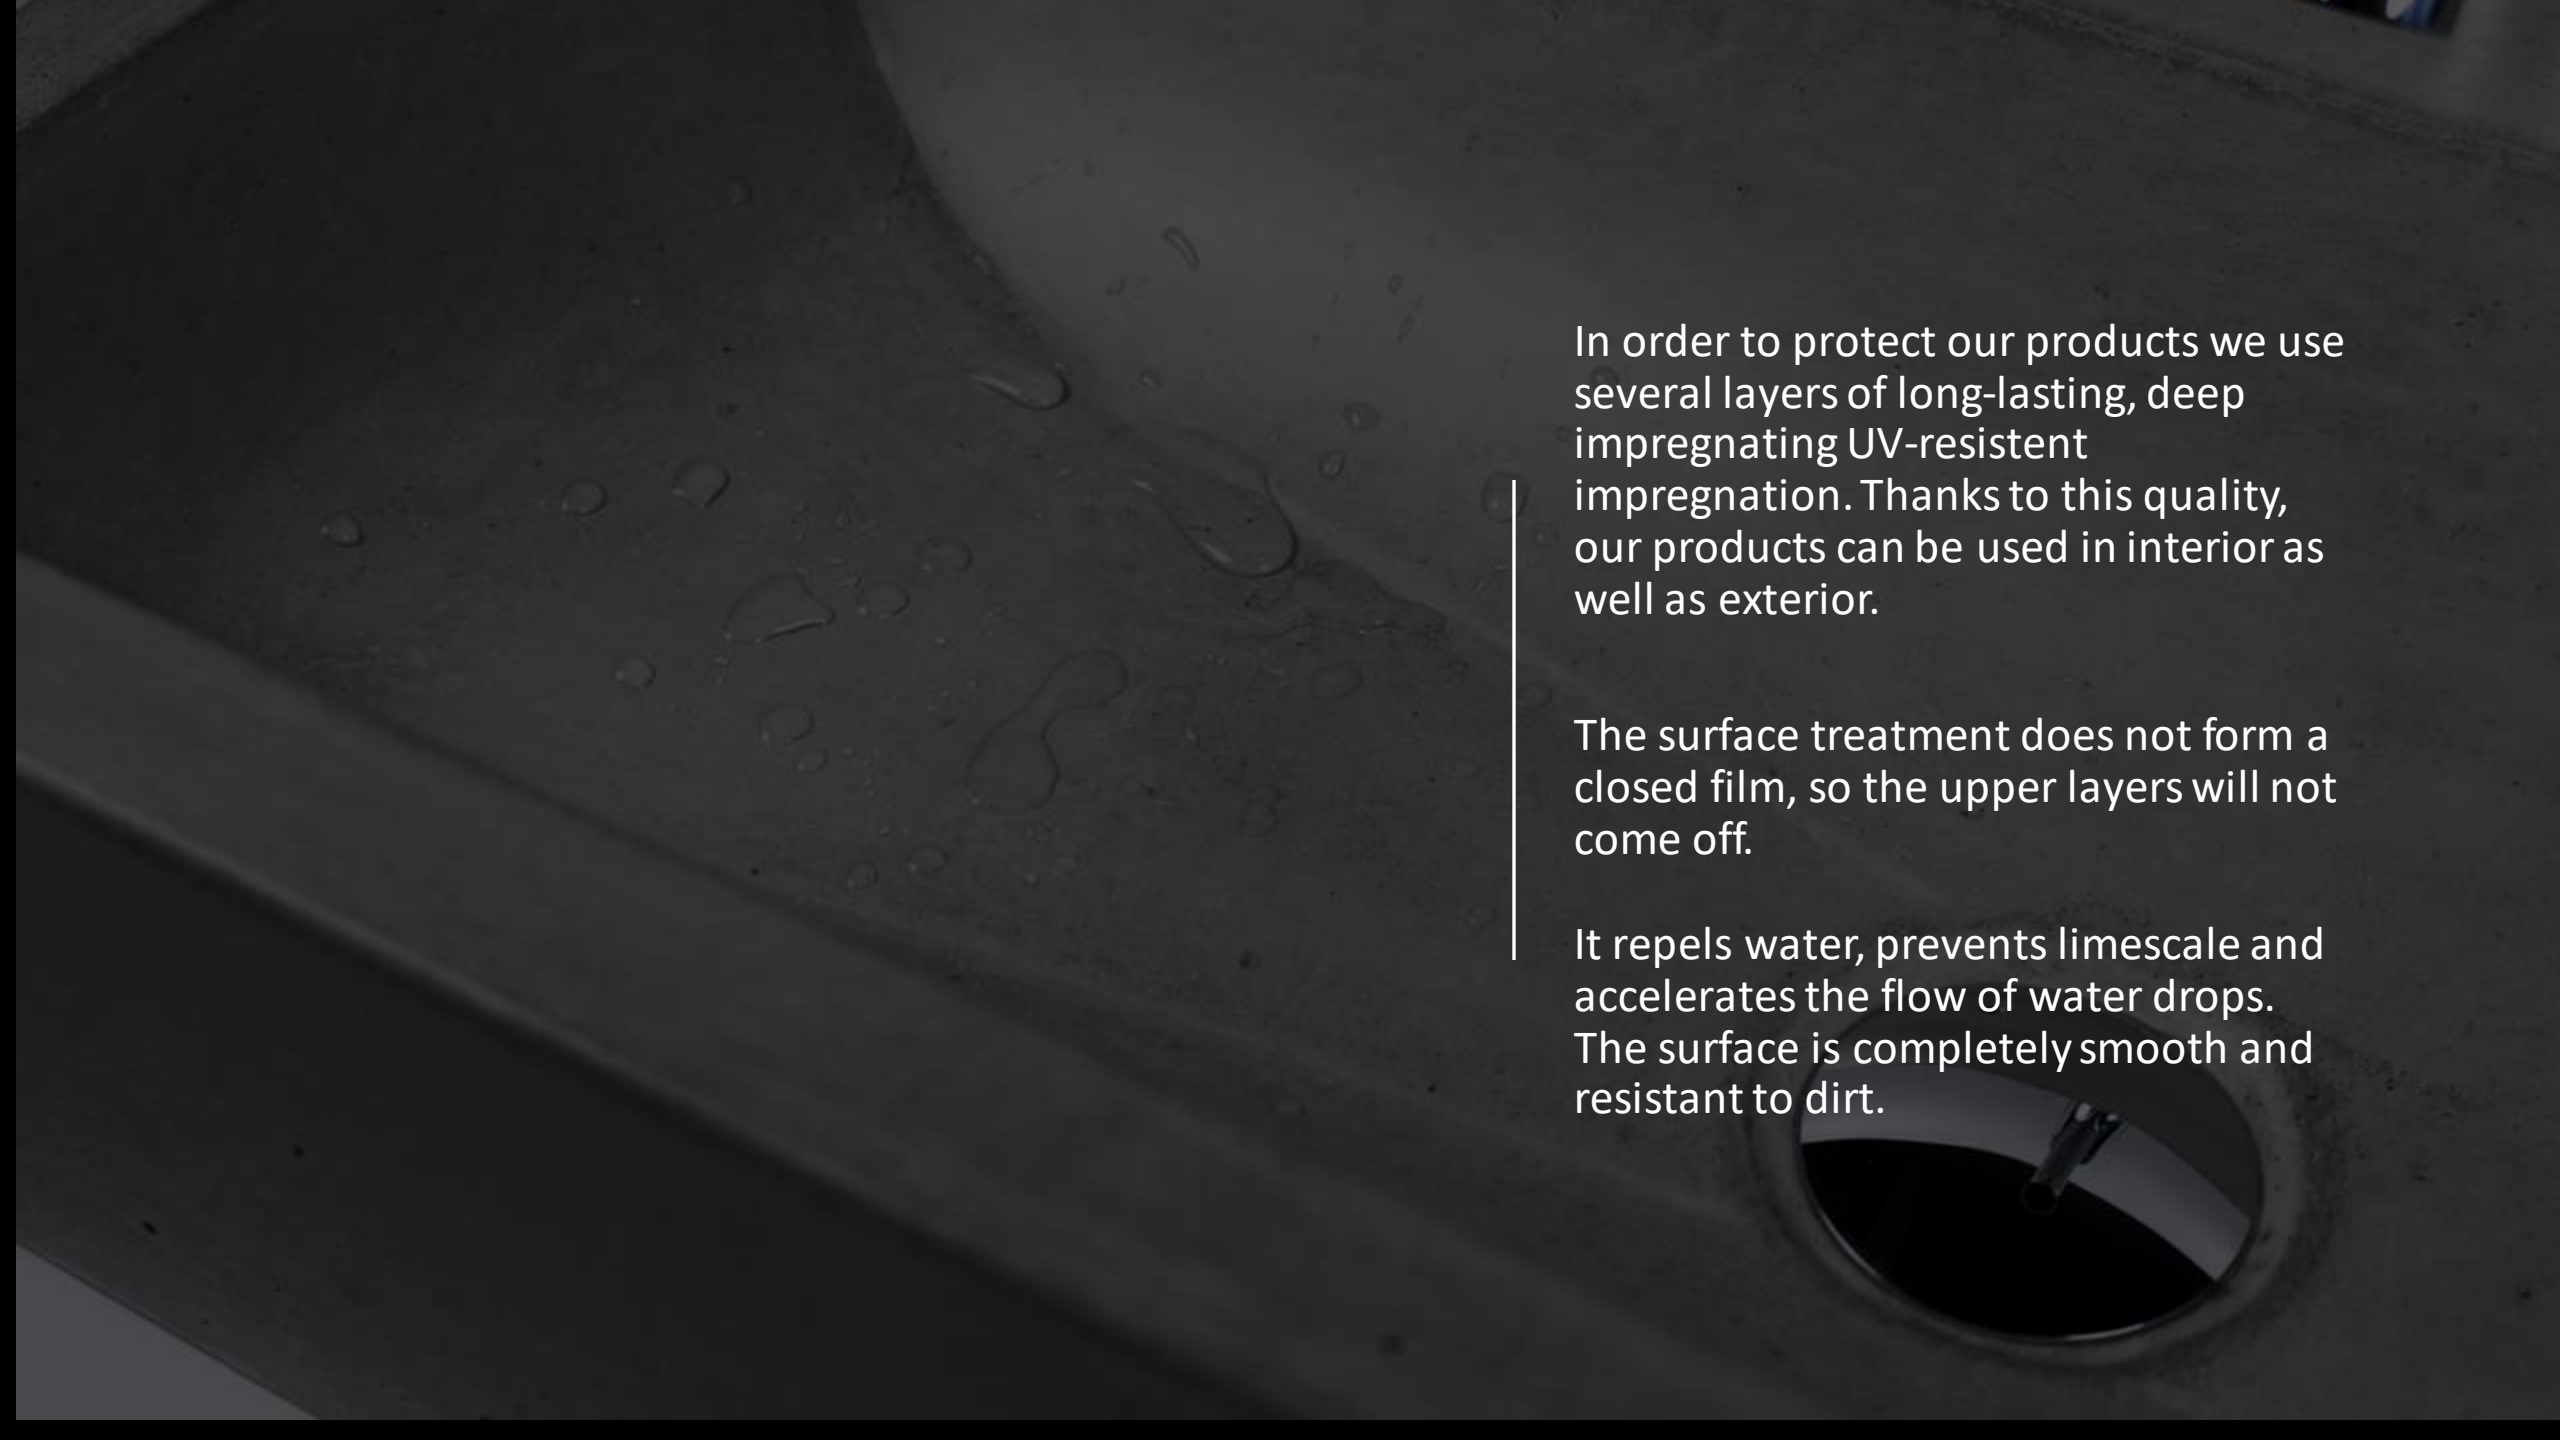

OVER THE YEARS, WE HAVE MASTERED THE ART

Durability, strength, longevity and natural appearance make concrete a timeless material.

In all our products, we use ultra-high performance concrete developed to increase the life time and improve the compression and tension strength. This innovation far exceeds the performance of the traditional types of concrete, dramatically extends the life time and improves durability.

The products are hand - polished several times and the pores on the inside are filled to achieve a smooth, easy – to – maintain surface.

In order to protect our products we use several layers of long-lasting, deep impregnating UV-resistant impregnation. Thanks to this quality, our products can be used in interior as well as exterior.

The surface treatment does not form a closed film, so the upper layers will not come off.

It repels water, prevents limescale and accelerates the flow of water drops. The surface is completely smooth and resistant to dirt.

There are no limits to imagination, boundaries must be crossed.

We are happy for every new challenge – be it a specific solution for your interior or a commercial project in public space.

We can demonstrate a long track of completed projects of atypical kitchen worktops, concrete furniture, bathrooms as well as commercial spaces.

CRÉER production technology is the result of several years of hard working, experimenting and learning lessons from our own mistakes. Having understood what it is all about, we set up our processes to guarantee our customers the top quality and utility value of all our products.
